Open Spin 1-00-70 Package Contents

This package contains Open Spin as of 3/11/2014.

Changes In This Version

Open Spin release branch changes:

- Fixed memory usage and leaks. OpenSpin now uses much less memory by default (and in most usage cases).
- Another attempt at resolving the stricmp/strcasecmp issues with GCC 4.8 and newer.
- Fixed a bug where the compiler sometimes would report the incorrect file and line number for a OBJ keyword not starting in the first column.
- The version number is now displayed in the banner. I've started the version at 1.00.70 (where 70 is the build number).
